

# BACK UP™

Improve your posture and  
increase your productivity

**BQE** DUTCH DESIGN  
BACK QUALITY ERGONOMICS  
STOOLS & CHAIRS

All BQE work stools and chairs are designed in such a way that it is easy to adopt a better sitting posture while working, which gives the stools/chairs a clear preventative and curative character. Development and production are based on general scientific background, specific studies and practical experience.

## The Back Up™

The ergonomic chair with an oblique seat part for a closer position to the patient or microscope with maximum back support.

The chair facilitates a healthy sitting position - an open angle between upper legs and back (about 110 degrees or more) so that a slight hollow curvature of the spine is obtained. The sit bones rest comfortably on the horizontal part of the seat and the thighs on the oblique part with counter pressure, that can be adjusted by the hydraulic button (a). An elegant adjustable back support prevents the backward rounding of the spine and overload as a result.
